

# Nuance Concentrated Value Composite Perspectives

August 31, 2018

## Description of the Product

The Nuance Concentrated Value Composite is a classic value investment product investing primarily in the equity or equity-linked securities of United States based companies. The product will typically maintain 15-35 positions in the securities of companies that, in the opinion of the Nuance Investments Team, have leading and sustainable market share positions, above average financial strength, and are trading at prices materially below our internally derived view of intrinsic value. The product's primary benchmark is the Russell 3000 Value Index. Clients may also compare the product to the S&P 500 Index.

## Longer Term Performance Update

**Since Inception Return:** The return since inception (11/13/2008 through 8/31/2018) is 15.7 percent (annualized and net of fees) versus the Russell 3000 Value Index and S&P 500 Index, which have returned 12.9 percent and 15.0 percent respectively. We are pleased with this level of outperformance over time.

**Risk-Adjusted Returns:** Our Sharpe Ratio since inception through 8/31/2018 is 1.3 (net of fees) versus Russell 3000 Value Index at 0.9 and the S&P 500 Index at 1.1.

**Peer Group Returns through 6/30/2018:** Comparing our product to peers displays positive results over time. On a total return basis, since 11/30/08, we ranked 47 out of 950 peer group members (5th percentile) in the Morningstar Large Cap Value universe, 94 out of 308 (30th percentile) in the Morningstar Mid-Cap Value universe, and 32 out of 213 (15th percentile) in the Lipper Multi-Cap Value universe.

**Peer Group Risk-Adjusted Return through 6/30/2018:** On a risk-adjusted return basis, since 11/30/2008, (measured by the Sharpe Ratio) we ranked 6 out of 950 peer group members (1st percentile) in the Morningstar Large Cap Value universe, 2 out of 308 (1st percentile) in the Morningstar Mid-Cap Value universe, and 3 out of 213 (1st percentile) in the Lipper Multi-Cap Value universe.

Peer Group Analysis 11/30/2008 - 6/30/2018	Since Inception APR <sup>1</sup>	Standard Deviation (A) <sup>1</sup>	Sharpe Ratio (A) <sup>1</sup>
Nuance Concentrated Value Composite (Gross)	15.9	12.3	1.3

**Shorter Term Performance Update** (Two Year and Year-to-Date)

Rolling 2-Year Periods	Current 2-Year Period as of 8/31/2018		
11/30/2008 - 8/31/2018	Periods Beating the Index	Composite (%) Net of Fees <sup>1</sup>	Russell 3000 Value Index (%)
Nuance Concentrated Value Composite	63 / 94	67.0%	8.8
			12.4

Your team at Nuance cautions clients regarding the use of short-term performance as a tool to make investment decisions. That said, if a client wants to consider our short-term performance, we recommend emphasizing two-year rolling periods since our inception. Our normal discussion of short-term performance will center on two-year performance, but we will also note calendar year to date results as is our tradition.

For the period ending August 31, 2018, the Nuance Concentrated Value Composite two year rolling return is 8.8 percent (net of fees) versus the Russell 3000 Value Index and S&P 500 Index which have returned 12.4 percent and 17.9 percent respectively. Overall, we have outperformed in 63 out of the available 94 two-year periods as shown in the chart labeled Rolling 2-Year Return Periods.

Year-to-date, the Nuance Concentrated Value Composite has returned 0.3 percent (net of fees) versus the Russell 3000 Value Index and the S&P 500 Index, which have returned 4.2 percent and 9.9 percent respectively.

Calendar Year Performance as of 8/31/2018	11/13/08 - 12/31/08	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018 YTD
Nuance Concentrated Value Composite (Gross)	4.5	42.2	18.8	6.9	18.4	35.3	8.9	(1.3)	20.5	12.1	0.8
Nuance Concentrated Value Composite (Net)	4.5	41.7	18.1	6.3	17.8	34.5	8.1	(2.0)	19.7	11.3	0.3
Russell 3000 Value Index	0.4	19.8	16.3	(0.1)	17.6	32.7	12.7	(4.1)	18.4	13.2	4.2
S&P 500 Index	(0.5)	26.5	15.1	2.1	16.0	32.4	13.7	1.4	12.0	21.8	9.9

**Composition of the Portfolio** as of 8/31/2018

Portfolio Characteristics <sup>2</sup>	Nuance Concentrated Value Composite	Russell 3000 Value Index
Weighted Average Market Cap	55.2b	116.0b
Median Market Cap	26.2b	1.9b
Price to Earnings (internal and ttm)*	18.0x	19.4x
Dividend Yield	1.8%	2.4%
Return on Equity	18.5%	13.7%
Return on Assets	5.8%	5.1%
Active Share vs Russell 3000 Value	91.8%	-
Upside/Downside Capture Ratio vs Russell 3000 Value	85.9% / 59.6%	-
Number of Securities	32	2,074

We continue to be pleased with the overall composition of the portfolio. Remember that we are seeking investment opportunities in leading business franchises with better than average valuation support. Using the adjacent table, you can see that the portfolio has a Price to Earnings ratio of 18.0x versus the Russell 3000 Value Index of 19.4x. We are achieving this ratio with a portfolio of companies that have a return on assets of 5.8 percent versus the Russell 3000 Value Index of 5.1 percent. This dichotomy of above average companies selling at below average multiples has the opportunity for outperformance over the long-term, in our opinion.

<sup>1</sup>Based on Nuance internal estimates and benchmarked against the above noted Russell index.

**Sector Weights and Portfolio Positioning** as of 8/31/2018

There have been relatively few changes to the portfolio over the past month and sector weights remain stable. We remain overweight the Healthcare and Consumer Staples sectors as we continue to find select leaders with what we believe are better risk-rewards than other market opportunities. We are slightly overweight the Financial sector where a combination of low interest rates and a higher than average catastrophe year has created some significant opportunities, in our view. Specifically, we are finding opportunities within the Life & Health and Property and Casualty Insurance sub-industry. We remain underweight the Energy sector where we believe the sector is facing a multi-year period of competitive transition. Lastly, we remain underweight the Industrial, Utility, Consumer Discretionary and Information Technology sectors primarily due to valuation concerns.

**Stocks We Added to Your Portfolio (August 2018):**

None.

**Stocks We Eliminated from Your Portfolio (August 2018):**

Abaxis, Inc. (ABAX): We exited our position in ABAX as Zoetis Inc. (ZTS) completed its acquisition for approximately \$83.00 per share in cash.

Hub Group, Inc. (HUBG): We exited our position in HUBG as the stock appreciated past our view of fair value.

**Nuance Perspectives from President & CIO, Scott Moore, CFA**

Dear Clients,

Through 8/31/2018, your Nuance Concentrated Value Composite was up 0.29 percent (net of fees) versus the Russell 3000 Value Index up 4.18 percent and the S&P 500 Index up 9.94 percent. Most importantly to us, since our inception on 11/13/2008, the Nuance Concentrated Value Composite is up 15.66 percent (annualized and net of fees) versus the Russell 3000 Value Index up 12.89 percent and the S&P 500 Index up 14.96 percent.

For this month's commentary, we are going to continue our recent theme of discussing opportunities we are seeing in the marketplace. We have discussed a great deal recently about the narrow set of opportunities that exists these days which is classic to late economic and valuation cycles. Next month, we will share some more late cycle data which we hope will shed some more light on the extreme nature of late cycles and the risk they bear.

For this month, however, an interesting opportunity and our overall exposure to the Financial sector will be the topic. We are roughly equal weight in the Financial sector at month-end; however, we are underweight in the Bank and Capital Market industries and overweight in the Insurance industry. Within the insurance industry, our topic today is the Life & Health Insurance sub-industry, and why we are overweight this space while being underweight the banking space.

On the Bank industry, we believe the stocks – in general – have gone from inexpensive to expensive over the last few years as our favorite commercial banks have transitioned from under-earning their long-term potential to over-earning that potential. This change in earnings power has primarily resulted from a commercial bank's leverage to a rise in short-term interest rates as the Fed Funds rate has risen almost 200 bps from 0.10% to nearly 2% over the last several years. This increase has driven the earnings power improvement and the valuation improvement in the space. Today, the risk rewards of most banks we like are less than ideal candidates for inclusion in the portfolio. We believe the majority of the high quality commercial banks that we study are over-earning their long-term potential, hence the underweight position. We are pleased to have made solid investments in companies like Commerce Bancshares Inc. (CBSH) and BOK Financial Corp. (BOKF) as these trends have occurred, but note, we have eliminated both of those stocks from your portfolio as the valuations became full in our view.

Now on to the highlight of this month's writing – the Life & Health Insurance sub industry. While short term rates have moved meaningfully higher (nearly 200 bps over the last three years), long-term rates have been slower to move. Over the last three years, the United States Government 10 YR treasury yield has risen from the mid to high 1%'s to about 2.7-2.9% as of this writing. While certainly higher, long term rates have not risen as much as short term rates, and the result is a flattening yield curve. The other result is a continuation of under-earnings in the Life & Health insurance space in general. Much like commercial

banks' earnings power is largely levered to short-term interest rates, Life & Health insurers' earnings power is largely levered to long-term interest rates. The primary reason for this is that the duration of their investment books tends to be around 15 years. As such, they are investing their securities book in long-dated fixed income securities. Reinsurance Group of America, Inc. (RGA), is a great example of one of our holdings today. RGA is a leading life & health reinsurer with a dominant market share position in this space and a solid balance sheet. RGA has experienced modest benefits thus far from rising long term interest rates but has also had transitorily high US group mortality hurt near term earnings. As such, we believe the company is under-earning its potential due to both near term mortality issues which we believe are transitory, as well as what believe to be long term interest rates that continue to be below our long term normal assumptions. In more detail, RGA is earning about \$11.40 today versus our internal normal earnings per share estimate of \$13.50. This under-earnings has caused poor stock price performance recently, and we think is leading to a positive risk reward in RGA at \$143 per share or 10.5x our normalized earnings power. This 10.5x price to normalized earnings compares particularly well versus an internally derived normalized price to earnings of our entire group of leading business franchises (our Nuance Master List) of closer to 24-25x. We would note that we also own Metlife Inc. (MET) and Unum Group (UNM) based on a similar thesis.

As we remind our clients, our team studies each company that we own in the portfolio using a bottom-up, one stock at a time Nuance approach. During that process, we place a strong emphasis on ensuring that the company has leading and sustainable market share positions across the vast majority of its businesses, can deliver above-average returns on capital versus peers over a business cycle, and has a strong financial position versus its peers. With those characteristics studied and understood, we then prepare our own proprietary financial statements for each company that attempts to normalize the financial statement to a state of normalcy or to what we think of as a mid-business cycle state. With those financial statements created, we then study historical valuation data to ascertain a fair value and downside value for each of the leading businesses that we believe have the traits of a successful investment. At that stage, we then only invest in the companies on our list that, in our opinion, have significantly better risk rewards than the market set of opportunities.

## Compliance Statement

Nuance claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. Nuance has been independently verified for the periods 11/03/08 – 3/31/2018 by Absolute Performance Verification. The verification reports are available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. Nuance is an investment adviser registered with the Securities and Exchange Commission. The firm maintains a complete list and description of composites, which is available upon request. Results are based on fully discretionary separate accounts under management, including those accounts no longer with the firm. The U.S. Dollar is the currency used to express performance returns and assets. Performance results are presented both net and gross of management fees and include the reinvestment of income. Both gross and net of fee returns are reduced by trading expenses. Net of fee returns are reduced by Actual investment advisory fees and other expenses that may be incurred in the management of the account. The firm does not currently assess any Performance Based Fees. From the inception of each composite until 12/31/10, Time Weighted Return was compounded on a monthly basis. Beginning 01/01/11 through present, Time Weighted Return was compounded on a daily basis.

Dispersion is calculated from gross of fee returns using an equal-weighted standard deviation methodology. Only those accounts included for the full calculation period are part of the dispersion calculation. The 3-year Ex-post annualized standard deviation value is calculated using 36 consecutive monthly gross of fee returns to the end calculation period. Prior to January 1, 2017 dispersion was calculated using an asset-weighted methodology. The calculation methodology was updated based on a new performance system dispersion calculation. Nuance has adopted the following Significant Cash Flow Policy. An account will be removed from a composite if a client has given specific instructions that prevent full investment of the cash flow(s) in a timely manner (defined as 5 business days or greater), or if a single cash flow is equal or greater than 10 percent of the total account value based on the beginning of month market value. If these circumstances exist, the account will be removed from the composite and added back to the composite on the first day of the following month.

Our Core offerings are the Nuance Mid Cap Value Strategy, the Nuance Concentrated Value Strategy and the Nuance Concentrated Value Long-Short Strategy. More information regarding Composite descriptions and policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request by contacting client.services@nuanceinvestments.com or 816-743-7080.

## Important Disclosures

Nuance Investments, LLC (the "Firm") is a Registered Investment Advisor. The Firm's Nuance Concentrated Value Composite (the "Composite") is a composite of actual accounts invested in the Nuance Concentrated Value investment strategy. The inception date for the Composite is 11/13/2008. The Composite includes all accounts that have invested in the strategy; including accounts no longer managed by the Firm and are presented in US Dollars. The Primary Benchmark for the Composite is the Russell 3000 Value Index. The Russell 3000 Value Index measures the performance of the broad value segment of the U.S. equity universe. It includes those Russell 3000 companies with lower price-to-book ratios and lower forecasted growth values. The Secondary Benchmark for the Composite is the S&P 500 Index TR. The S&P 500 Index TR is a market-value weighted index representing the performance of 500 widely held publicly traded large-capitalization stocks. Individuals cannot invest directly in any index. These indices are used for comparison purposes only and are not meant to be indicative of a portfolio's performance, asset composition, or volatility. The performance of the Composite may differ markedly from that of compared indices due to varying degrees of diversification and/or other facts. Return calculations for the Composite are provided by Clearwater Analytics. Return calculations for all indices are provided by Bloomberg. A full schedule of fees for all Firm products is available upon request. The collection of fees has a compounding effect on the total rate of return net of investment management fees. Net of fee performance is presented after all actual investment management fees and trading expenses.

All material presented is compiled from sources believed to be reliable and current, but accuracy cannot be guaranteed. The information contained herein should not be construed as personalized investment advice and should not be considered as a solicitation to buy or sell any security or engage in a particular investment strategy. Investing involves risk, including the possible loss of principal. Nuance Investments, LLC is majority owned by Montage Investments, LLC. Prior to September 1, 2010 Nuance operated under the name Mariner Value Strategies, LLC.

(1) Risk-Adjusted Return (Sharpe Ratio), Standard Deviation and return calculations for the Composite and indices provided by Zephyr Style Advisor. The Composite has been compared to various peer groups defined by investment style. The Composite is an all market capitalization value investment style. The Morningstar Large Value Peer Group, Mid Cap Value Group and the Lipper Multi-Cap Value Funds Peer Group have been presented as investment strategies with similar investment styles. For peer group comparisons all Returns, Standard Deviation and Sharpe Ratio calculations, including those of the Composite were calculated by Zephyr Style Advisor based upon strategies with monthly return data from December 2008 to 6/30/2018. Zephyr reports on month end returns only. For the purposes of peer group comparisons Since Inception returns are shown beginning 11/30/2008. The Sharpe Ratio is a calculation of a product's risk-adjusted performance over time. The Ratio is calculated by taking a product's annualized excess return over a risk-free rate (The Firm uses the Citigroup 3-Month Treasury Bill as the risk-free rate) and dividing by its annualized standard deviation calculated using monthly returns.

(2) Index statistics are provided by Russell. Characteristics calculations use holdings at market close on the stated date, including cash & cash equivalents. The following Composite characteristics are calculated using Bloomberg: Median Market Cap (midpoint of market capitalization of the stocks in the portfolio), Dividend Yield (annual dividends relative to share price), Return on Equity (net income divided by shareholder equity), Return on Assets (net income divided by average total assets). The P/E Statistics are a Nuance internal calculation. The dollar-weighted harmonic mean of individual company P/E ratios is used. This approach first considers holdings' E/P, which are then summed on a dollar-weighted basis across the entire portfolio to achieve a portfolio E/P ratio. Finally, the inverse of this ratio is taken to arrive at the Portfolio P/E ratio. Active share, as calculated by Morningstar Direct, is a statistic that measures a strategy's holdings relative to the holdings of the appropriate benchmark. Standard deviation is a measure of volatility showing the average deviations of a return series from its mean. The upside capture ratio is an indication of a manager's ability to match returns in periods of market strength, while the downside capture ratio measures a manager's ability to curtail losses in periods of index weakness. Results are gross of fees for the period since inception through present. Both upside/downside ratios and standard deviation are calculated using Style Advisor.

Portfolio holdings and sector allocations are subjected to change and are not a recommendation to buy or sell any security. Holdings identified do not represent all of the securities purchased, sold or recommended by the adviser. As of 8/31/2018 portfolio weights of names discussed are as follows: Unum Group (UNM) 3.60%, Reinsurance Group of America, Inc. (RGA) 3.47%, Metlife Inc. (MET) 3.41%, Abaxis Inc. (ABAX) 0.00%, BOK Financial Corp. (BOKF) 0.00%, Commerce Bancshares Inc. (CBSH) 0.00% and Hub Group, Inc. (HUBG) 0.00%.

Past Performance is not a guarantee of future results. Any investment contains risk including the risk of total loss. There is no guarantee that an investment with the strategy will meet its investment objectives. Please request a copy of the Firm's Full General Disclosures for more information.
